

Room to test. Freedom to innovate.

Environment

Halli is developing a UAS and C-UAS testing environment for companies and research teams. Airport infrastructure, aviation expertise and a varied surrounding landscape provide the foundation. Four seasons support real-world evaluation.

Capabilities and development stage

Existing: Halli Airport and its aviation setting. In development: operations centre, data collection and management, communications and supporting infrastructure. FAST and FLEX operating models are being prepared. Areas, flight heights, permissions, resources and availability require test-specific confirmation.

Path to testing

Objective -> suitability review -> test plan and permissions -> agreed execution -> results review. Responsibilities, data ownership, confidentiality, timing and costs are agreed during preparation.

Contact

Marja Salonen / Project manager, City of Jämsä
+358 44 9018 997 | marja.salonen@jamsa.fi

Location

Halli, Jämsä / EFHA / KEV. Finavia airport address: Lentoasemantie 5, 35600 Halli. Agree the actual meeting point and access arrangements separately.
